Election/Restriction

1. Applicant's preliminary amendment filed December 15, 2005 is acknowledged.

Claims 1-6 have been canceled. Claims 7-23 have been added.

2. Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in response to this action, to elect a single invention to which the claims must be restricted.

Group I Claim 7 is drawn to a method for inhibiting neuromuscular transmission comprising administering to a patient an effective amount of a M toxin (HA negative) of a type A toxin.

Group II Claims 8-23 are drawn to a method for treating a disease caused by hypermyotonia comprising administering to a patient an effective amount of a M toxin (HA negative) of a type A toxin.

3. The inventions listed as Groups I-II do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons:

Groups I and II lack novelty under PCT Article 33(2) as anticipated by (*Jpn. J. Med. Sci. Biol.*, 43, 219-231, 1990). Tabita et al teach compositions comprising the M toxin, molecular weight 300 k (see the Abstract). Tabita et al teach that the Japan strains used to produce M toxins were Chiba-H, Kyoto-F and 7103-H (Table I, page 221). Tabita et al teach that all Japan strains were HA negative (see 223 and Table IV, page 226). The special technical feature linking the two Groups is the M toxin (HA negative) from *Clostridium botulinum* type A. Based on the teaching of Tabita et al, the special technical feature lacks novelty, therefore the other claims are not so linked by a special technical feature within the meaning of PCT Rule 13.2 so as to form a single inventive concept. Thus, lack of unity exists.
